

CPR with an Advanced Airway

Interactive Movement of Air

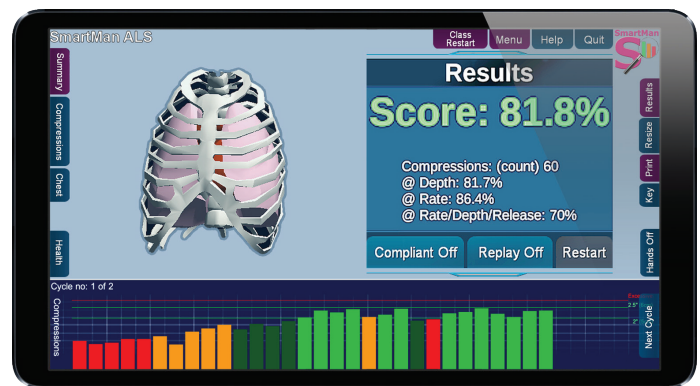

This system has a high fidelity advanced airway that provides feedback on how well you intubate. This improves cooperation when performing CPR with an advanced airway and while intubating on a moving chest. This product is also suitable for training in BLS skills.

Interactive Airway

Excellent physical feel and digital display on interaction of the chest compressions and the ventilations. This dramatically improves CPR on an intubated patient.

CPR with Advanced Airway

- Perform 30:2 BLS CPR
- Perform 10:1 Asynchronous CPR
(Continuous Compressions with a Ventilation Every 6 Seconds)
- Visually See Interaction of Compressions and Ventilation

30:2 Before Intubated

10:1 When Intubated

High Fidelity Airway

Accurate Feedback on Depth, Rate, Release, and Hitting Bottom

Accurate Feedback on Volume of Air and Rate Given

Intubate

- Reports How Quickly Airway Device Established
- Reports Whether Cuff is Holding
- Reports Efficiency and Gives a Score
- Also Practice with Compressions Ongoing

Team Work

- Feedback on Skills Working Together
- Score for the Total Performance
- Record Team or Individuals
- Recall Data for Team Debriefing
