

BLS + Quality Control Module

Includes all the features of BLS CPR SM101 and SM201

Accurate Evidence Based Training with Data

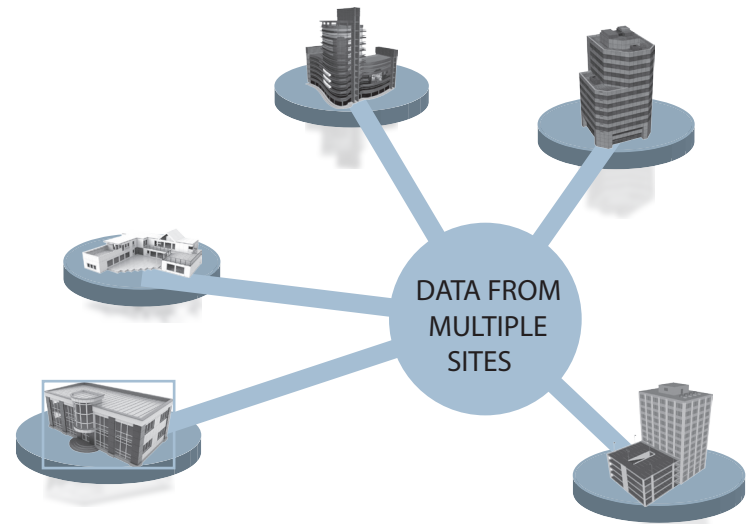

You get the easy to use, at-a-glance feedback system proven to have people achieve competence. And besides all of the training features of SM201, it gives you the tools to analyse your CPR skill results from multiple sites.

Results Management

The quality control module allows you to analyse your CPR results. You can chart trends, compare groups, look at historical changes, and relate scores to survival rates.

Validate Over Time

Data can be examined live so you can verify it as it is being performed. This allows you to verify that what you want is being performed. It can be collated at a later time.

Assemble Data

- Data Available Immediately
- Auto Send Data the Cloud
- Send Data Later
- Assign to Profession

Filter Data

- Filter by Date, Activity, Key Code, or by Number of Attempts
- Assign Identifiers After Results have been completed
- Exclude Specific Results

Export Data

- Customized Filtered Data
- Create Different Data Sets
- Export Sub-Data Sets to Comma Delimited File
- Export Data with Comments
