Advanced Airway Management Training Basic Life Support CPR Skills Training Ventilations Skills Training

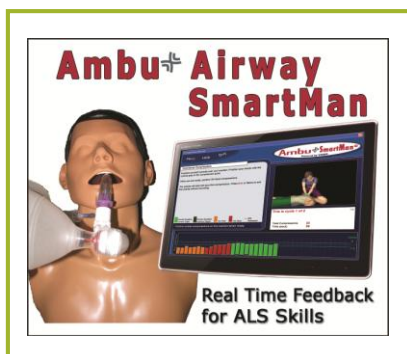

Ambu Airway SmartMan is a breakthrough in Advanced Airway Management Training. It uses the same look and feel as the award winning Ambu SmartMan.

Airway SmartMan is the first system to bring Advanced Airway Management Training and Basic CPR Skills Training to you with Real Time Visual Color Feedback.

Effectiveness of Intubating a Victim: Practice placing an Advanced Airway with an endotracheal tube, and a variety of perilaryngeal and esophageal devices. Real time feedback lets you know if the airway device is correctly placed, how long it took and if there is an effective seal.

Optimizing Value of Ventilations during Continuous Chest Compressions: Airway SmartMan accurately recreates the natural reverse flow of air into the lungs on release of a chest compression. It teaches you how to optimize ventilation for the victim by accurately timing the ventilation with release of the chest

Effectiveness of Two Rescuer CPR: Practice a full cycle of CPR with continuous chest compressions on an intubated victim, ventilations, swapping roles and placing an intubation device.

All SmartMan Training Systems feature Real Time Feedback using Easy to Understand Color Bar Graphs.

In both Practice and Test Modes, you can choose to perform Skills with the Visual Feedback on or off.

Airway SmartMan can also be used to train for correct Chest Compressions and BLS Ventilations with a BVM.
